## **DETAILED ACTION**

### ***Allowable Subject Matter***

Claims 1-10 are allowed over prior art.

The following is an examiner's statement of reasons for allowance:

Regarding claims 1-10, the prior art fails to teach an x-ray unit or method having an automatically adjustable collimator including diaphragm and filter elements for locally attenuating and/or filtering an x-ray beam output from an x-ray source and a data processing unit is designed to localize a region of interest inside a body on at least a first x-ray picture result in subsequent x-ray pictures that are concentrated on the localized region of interest, wherein a concentration of the subsequent x-ray pictures includes a best possible display of the localized region of interest and a blocking out of all body regions not belonging to the localized region of interest, further including a smooth transition zone between the display of the localized region of interest and the blocking out so that certain residual information remains detectable in the transition zone with reduced radiation exposure as claimed in independent claims 1 and 10.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Chiu et al. (US 5369678) teaches a fluoroscopic method having transition zone but fails to teach the allowable subject matter above.
